## EDUCATION

---

### University of California, San Diego

Graduating June 2027

*Bachelor of Science in Cognitive Science spec. Design and Interaction, Minors in Data Science and Music*

*San Diego, CA*

- Provost Honors; 3.92/4.0 GPA | Available to onboard: June 2027

## PROFESSIONAL EXPERIENCE

---

### JPMorganChase

May - August 2026

*Product Design Intern – Consumer Banking*

*New York, NY*

- Owned **end-to-end design** for a data-driven module within an internal platform, applying **AI-assisted synthesis** to surface client needs at the entry point instead of 3 screens in; screens approved by product and handed off to build.
- Expressed complex interaction patterns through **high-fidelity prototyping** and **AI-assisted code** (Cursor, Claude Code), aligning design and engineering on technical feasibility.
- Collaborated fluidly with **20+ stakeholders**, subject matter experts, and product owners, facilitating **two workshop sessions** to ideate and align on product vision; presented design solutions to product owners, design leads, and VPs.

### Triton Software Engineering

September 2024 - Present

*VP of Design*

*San Diego, CA*

- Directed end-to-end product design for multi-surface platforms across **9-month lifecycles**, applying information architecture to serve **multiple distinct user groups** (e.g. visitors, internal admins). ([Live Project](#))
- Led product cycle from initiation through delivery, working closely with engineers and PMs to ensure technical feasibility and smooth handoff; shipped admin tools that let staff maintain **10+ site components** without a developer.
- Mentored a team of **20+ designers** to establish a collaborative design culture; conducted usability testing with 15+ participants to iterate on core workflows, making independent **design decisions** while incorporating critique.
- Built a scalable **component-based design system** from the ground up, defining documentation to streamline cross-functional flows; restructured components across breakpoints with attention to tap targets and one-handed reach.

### UC San Diego Business & Financial Services (BFS)

August 2024 - August 2026

*User Experience Designer and AI Specialist*

*San Diego, CA*

- Designed and shipped enterprise platforms based on analysis of **14,000+ support tickets** using Python, applying rigorous systems thinking and information architecture to transform complex operational data into intuitive interfaces.
- Led accessibility remediation across 300+ campus-facing platform pages, raising WCAG audit scores from **70% to ~99%**.
- Created the design system and template for a weekly digest reaching **26,000+ subscribers**, maintaining it over **2 years**.

## PROJECTS

---

### Google Gemini Extension

January – April 2026

*Product Designer*

*San Diego, CA*

- Designed a **direct-manipulation editing layer** embedded natively in Google Gemini, replacing full-video regeneration with scoped edits across 4 modes so users target a specific moment instead of re-prompting from scratch. ([Prototype](#))
- Built the high-fidelity prototype using Figma and Figma Make, using **AI-assisted coding** to test interactions in a working interface rather than a static mockup, proving technical viability.

## SKILLS

---

**Design & Prototyping:** Figma; Figma Draw; Adobe Creative Suite (Photoshop, Illustrator, InDesign); Sketch.

**Code & AI Workflows:** Claude Code; Cursor; Python; TypeScript; Next.js; React; CSS; HTML.

**Professional Skills:** Product design; UX research; Design systems; Prototyping; Information architecture; Visual design; Wireframing; Responsive design; User testing; Accessibility (WCAG); Systems thinking; Cross-functional collaboration.
